

Integrated Packaging Systems Inc.

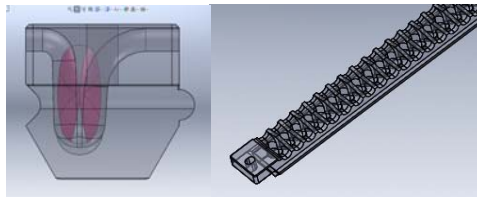

Why IPS Slats are the best in the Business!

IPS has been providing the high quality slats for the most discriminating pharmaceutical manufacturers. With over 30 years experience, we have developed solutions for some of the most challenging products.

It is not enough to leave well enough alone. The "one size fits all" solution is inefficient and unreliable resulting in low counts and lost production.

We employ the latest in Computer Aided Engineering and manufacturing. Our material is exclusively selected for consistency and stability.

At IPS...technology and experience come together to push slat design toward greater efficiency and through put.

If your tablet filling operation is lacking, give us a call and let us put our experience to work for you.

Procount Tablet Counter/Filler – Slat Counter

Designed for use with seventy-two (72) slats. This counter can be used either with all active slats or with one to two blanks separating the count patterns. Use of blanks is determined by type of product, or counts desired.

The counter will operate with either a pneumatic bottle indexing system, or a feed screw, depending upon size of the counter and/or speed requirements.

Procount 72-42

The Revolutionary design reduces cleaning and changeover time to less than 30 minutes. Slats are driven by a Servo motor for precise slat movement and exact slat positioning. Exterior pneumatic vibrator to help insure each slat pocket is filled with one product.

Optional Timing Screw Drive For accurate placement of containers under the filling chutes. The timing screw is driven by a Servo motor to insure proper placement of containers under the filling chute

The Exclusive Accusure Verification system is the perfect marriage of slat counter speed with electronic counter verification that each bottle has the correct count.

Designed and built by experts, who have been in the packaging business for over 35 years, these machines are manufactured to the highest possible standards.
